## SECTION 01

# The Category — why now

A managed AI employee is the 2026 equivalent of starting a Facebook-ads agency in 2013. The infrastructure just matured; the market has not caught up.

Until 2025, "AI for business" meant chatbots that answered questions and dashboards that needed a human to act. The managed-AI-employee model flips that: one agent, inside the client's workspace, owns a recurring *outcome* — not a conversation. The agent does the work, not just advises on it.

**Proof the category is real (market evidence, not our product):** Nick Vasilescu publicly reports closing £5k/month clients for design agencies, with his own Hermes agent building and onboarding the client agents. Greg Isenberg's May 2026 podcast productised the playbook: charge \$5k/month for OpenClaw agents, \$10k for Hermes agents, sell into legacy verticals. The model is no longer a bet — it is a pattern.

5

clients @ £5k = £25k/mo = £300k ARR

2.5×

less overhead than \$2k pricing for  
same revenue

2026

window is open now, not later

The opportunity is not "build AI." It is **deploy and operate AI as a managed service** for businesses that do not want to touch the stack. That is the seat Owl occupies.

## Owl Positioning — yours, not theirs

Dewey proved the model. Owl owns it for the UK market, on your infrastructure, under your guarantees.

Nick's "Dewey" is his personal agent and the inspiration for the category. Owl is **your** brand, your service, your client relationship. Never present Dewey as the product. Use it only as market evidence that the £5k/month managed-AI-employee offer already closes.

| Dimension | Dewey (category proof) | Owl (your brand)                         |
|-----------|------------------------|------------------------------------------|
| Owner     | Nick Vasilescu         | Human Architect (you)                    |
| Market    | Global / US-leaning    | UK-first, UK SMBs £1M–£2M+               |
| Infra     | Orgo cloud + paid SaaS | Your VPS, free stack, self-hosted        |
| Promise   | Result-led             | Guaranteed: 48h live or refund           |
| Upside    | Single client          | B2B2B: client resells to their customers |

Positioning line: *"Owl is the managed AI employee for UK businesses — built, onboarded, and fulfilled by Human Architect, on your own infrastructure, with a guarantee a US tool won't give you."*

# Brand DNA

## Name — Owl

Owls see in the dark. They watch while you sleep. They act precisely. The name signals a quiet, always-on operator that catches what human teams miss at 1–2am and at scale. It is memorable, ownable, and marks cleanly.

## Voice

- **Confident, not hyped.** State outcomes. Never "revolutionise."
- **Operator-grade.** Talk like the person who ships, not the vendor who pitches.
- **Plain English.** No "synergy." No "leverage." No jargon a £1.5M-revenue owner can't repeat to their ops manager.
- **UK-specific.** NI, pension, VAT, Ltd, "SMB" — not "SMBs" spelled the American way when it matters. Use £, not \$.

## Brand promise

"One agent. One outcome. Flat £5,000. Live in 48 hours — or the first month is refunded."

## Values

| Value     | What it means in the work                                |
|-----------|----------------------------------------------------------|
| Ownership | The client owns the result; we own the delivery.         |
| Control   | Self-hosted, no account-freeze risk, no per-seat trap.   |
| Proof     | We guarantee; we don't just claim.                       |
| Resell    | Every build can become the client's second revenue line. |

## Offer Architecture — the £5k engine

One price. Everything included. The simplicity is the product.

| Component | Specification                                                                          |
|-----------|----------------------------------------------------------------------------------------|
| Price     | £5,000 / month / client. No per-seat fees. No usage surprises.                         |
| Scope     | One agent, one defined outcome (lead follow-up, inbox triage, ops reporting, support). |
| Speed     | Live within 48 hours of the scoping call.                                              |
| Guarantee | If it doesn't save >£5k/mo in human hours by day 30 → partial refund.                  |
| Channel   | Slack or Telegram — where the client's team already lives.                             |
| Isolation | One profile, one bot token, one folder per client. One break never cascades.           |
| Upside    | Client may resell the build to their own customers (B2B2B).                            |

**Why £5k, not £2k:** At \$5k/mo, 5 clients = £300k ARR with 1 operator. At \$2k, you need 12–13 clients for the same revenue — 2.5× the overhead for identical money. Price is a leverage decision, not a discount lever.

### The OCA offer frame (from the proven playbook)

1. **Retainer up front.** You are paid before you build.
2. **One full automation in <7 days.** (Owl does 48h.)
3. **Money-back if not fulfilled.** De-risks the yes.
4. **Then expand.** Fleet → resell → second revenue line.

## Messaging House

One line at the top. Everything below it must ladder back up.

**Hero line:** "One agent. One outcome. Flat £5,000 — live in 48 hours or the first month is refunded."

### Elevator pitch (30s)

"Owl is a managed AI employee for UK businesses doing £1–2 million. We build, onboard, and operate an AI agent inside your Slack or Telegram that owns one broken workflow — lead follow-up, inbox triage, ops reporting. Flat £5k a month, everything included, live in 48 hours. If it doesn't save you more than it costs by day 30, we refund."

### Proof points (say these, not claims about others)

- The managed-AI-employee model is proven — operators publicly report £5k/month clients.
- Self-hosted on your infrastructure: no account-freeze risk, no per-seat trap.
- 48-hour deployment. Most "AI projects" die in a 30–45 day PoC. Owl ships live.
- Resell rights: the build becomes your second revenue line.

### Objection → reframe (keep these verbatim)

| Objection              | Reframe                                                                                                              |
|------------------------|----------------------------------------------------------------------------------------------------------------------|
| "£5k is too expensive" | "Two hours a day at £40/hr is £2,400/mo before mistakes. Owl pays for itself before your first two bad hires."       |
| "We don't do AI"       | "The agent lives in Slack. You don't touch code. You watch the work get done."                                       |
| "We tried AI"          | "Most AI fails because it ships a toy, not a worker. Owl is managed execution, not a demo."                          |
| "Too small"            | "SMBs at £1–2M pay faster and ask fewer questions. They value outcomes over novelty — exactly who Owl is built for." |

# The 8-Component Stack

Every useful AI employee is built from the same eight parts. Owl delivers all eight on a free, self-hosted base.

| # | Component          | Paid equivalent       | What Owl owns                 |
|---|--------------------|-----------------------|-------------------------------|
| 1 | Computer           | Orgo VM               | Your VPS, 24/7                |
| 2 | Email              | Notion/Mailpile       | Domain alias                  |
| 3 | Phone / IM         | Voice agent services  | Telegram gateway              |
| 4 | Comms channel      | Slack / iMessage      | Slack or Telegram             |
| 5 | Tools & connectors | Composio (+1000 apps) | Hermes skills + native tools  |
| 6 | Card (spend)       | Stripe / agent card   | Controlled spend (optional)   |
| 7 | Knowledge base     | Notion / Honcho       | ~/vault                       |
| 8 | Observability      | LangSmith / Latitude  | Cron → Telegram health alerts |

Architecture: **1 orchestrator + N sub-agents**. The main agent handles the client conversation; specialised sub-agents handle lead gen, follow-up, content, support. Isolation minimises blast radius — one sub-agent failing never takes down the system.

# Go-To-Market

## Target verticals (legacy, cash-rich, automation-poor)

- **Marketing / creative agencies** — lead follow-up, client reporting
- **Law firms** — intake, conflict checks, doc triage
- **Insurance brokers** — quote follow-up, claims inbox
- **Wholesale / distribution** — order inbox, supplier comms
- **Real estate** — viewing coordination, lead nurture
- **Manufacturing / trade** — ops reporting, supplier chase

## The X / LinkedIn playbook (from proven posting patterns)

1. **Lead with a result + a contrarian hook.** "My agent closed another £5k client. I built none of it."
2. **Show the human's tiny role.** "I ask the questions. The agent ships."
3. **Punch down on skepticism.** Reply to "why pay £5k when ChatGPT is £20" with value: no maternity leave, no sick days, half the cost of a UK hire.
4. **Post same-day as wins.** Multiple posts/day. Cadence > polish.
5. **Tag the ecosystem.** Network effects compound reach.

## Discovery → close (the 48h loop)

| Step            | Owner        | Output                                   |
|-----------------|--------------|------------------------------------------|
| Discovery call  | You          | One workflow scoped, one-page statement  |
| Build           | Owl (Hermes) | Client profile + sub-agents              |
| Onboard         | Owl          | Live in Slack / Telegram                 |
| Guarantee check | You          | Day-30 savings review → refund if missed |

# Visual Identity — the dark system

Owl's site and docs use a dark, dev-tool aesthetic — near-black, one green accent, Inter, mono labels. Calm authority, not startup noise.

#000  
base background

#26b65a  
primary accent (green)

#88d6a3  
accent ring / hover

| Element    | Rule                                                      |
|------------|-----------------------------------------------------------|
| Background | Near-black #000 / surfaces #0f0f0f / #1c1c1c              |
| Text       | White #fff primary, #a1a1aa secondary (AA contrast ≥7:1)  |
| Accent     | Single green #26b65a. Never two competing colours.        |
| Type       | Inter (loaded, not named-only). Mono for eyebrows/labels. |
| Motion     | Restraint: glow on CTAs, hover lift. No gimmicks.         |
| Shape      | Rounded cards (14px), pill CTAs (999px).                  |

The look says: *"We are operators, not a SaaS salesfloor."* Keep it. Every Owl touchpoint — site, PDF, proposal — uses this system.

# 90-Day Launch Plan

| Phase          | Days  | Action                                                                                 | Goal                           |
|----------------|-------|----------------------------------------------------------------------------------------|--------------------------------|
| 0 — Foundation | 1–14  | Ship Owl site (done). Write 3 X threads using the playbook.<br>Book 5 discovery calls. | 1 paid client                  |
| 1 — Prove      | 15–45 | Deploy first client in 48h. Run day-30 guarantee review.<br>Capture a UK testimonial.  | 1 live + 1 refunded-or-renewed |
| 2 — Repeat     | 46–75 | Systematise build via factory scripts. Post weekly wins. Offer resell to client #1.    | 3 clients = £15k/mo            |
| 3 — Scale      | 76–90 | B2B2B: client resells to their customers. Tighten vertical pitch (agencies first).     | £25k/mo run-rate               |

Metric that matters: **does the agent save the client more than £5,000/month in human hours?** If yes, you win and renew. If no, pivot the role or refund. That single question governs every engagement.

## Brand Rules — do / don't

| Do                                    | Don't                                    |
|---------------------------------------|------------------------------------------|
| Say "Owl by Human Architect"          | Say "Dewey" as if it's your product      |
| Use £, NI, Ltd, VAT — UK framing      | Use \$ or US-only proof on a UK page     |
| State the guarantee (48h / refund)    | Make unverifiable capability claims      |
| Lead with a result + hook             | Lead with features or jargon             |
| Keep the dark green system everywhere | Drift into colourful "AI hype" gradients |
| Name one workflow, not "AI"           | Pitch "an AI solution" generically       |
| Offer resell (B2B2B)                  | Cap the relationship at one agent        |

The one-line test for any Owl asset: *"Would a £1.5M-revenue UK owner read this and know exactly what they get, what it costs, and why they're safe?"* If yes — ship it. If no — rewrite.

● OWL · HUMAN ARCHITECT

# One agent. One outcome. Flat £5,000.

The managed AI employee for UK businesses. Built, onboarded, fulfilled. Live in 48 hours — or the first month is refunded.
