

ARSENAL FC

OWL MANAGED AI RESEARCH ENGINEER

Embedded with First Team Analysis

July 2026

EXECUTIVE SUMMARY

OWL is a managed AI employee built for elite football analysis. It ingests Opta, tracking, and video data, runs advanced models (xG, xA, passing networks, set-piece threat), and delivers ready-to-use insights directly to analysts and coaches.

Result: 75% faster insight delivery, deeper tactical context, and consistent pre-match / half-time intelligence.

KEY BENEFITS

- 60-minute insight turnaround post-match
- Automated xG and creative-threat dashboards
- Direct messaging to Telegram / iMessage / Slack
- Embedded with your workflow — no extra logins
- 48-hour deployment SLA

THE PROBLEM

Premier League analysis moves fast. Today, clubs face four bottlenecks that slow decision-making.

BEFORE OWL

- Analysts spend 6+ hours/week gathering data
- Insights arrive 24-48 hrs after matches
- Tactical trends seen in isolation
- Set-piece prep based on outdated trends
- Manual passing-network snapshots

AFTER OWL

- Real-time data ingestion & cleaning
- Insights delivered within 60 minutes FT
- Cross-match xG, PPDA, PPDA def/att trends
- Set-piece threat modelled per opponent
- Live network evolution + opponent mirror

1. TIME	Analysts spend 6+ hrs/week gathering data.
2. LATENCY	Delayed insights = missed adjustments.
3. CONTEXT	Metrics in silos, not connected.
4. DELIVERY	Reports sit in email, unactioned.

WHAT OWL DELIVERS

Five mapped duties — from intake to insight. Each locked to a first-team need.

1. DATA INGESTION	Pulls Opta, tracking, video metadata. Cleans, normalises, timestamps.
2. MODEL INFERENCE	xG/xA, PPDA, GCA, passing networks, set-piece maps per opponent.
3. INSIGHT SYNTHESIS	Turns raw outputs into scannable briefing cards.
4. DELIVERY	Pushes to Telegram, iMessage, Slack, email with timestamped archive.
5. EVOLUTION	Retrains on Arsenal-specific outcomes; accuracy improves weekly.

Outcome: Analysts coach. OWL prepares.

APPLIED AI SPECIALIST CAPABILITY

xG / xA	Shoot quality + chance creation context
PASSING NETWORKS	Live evolution + opponent mirror
SET PIECES	Corner / free-kick threat maps by zone
PPDA	Pressing intensity by phase
TRANSITION	Speed-of-play and verticality metrics

OWL doesn’t dump raw numbers. It structures them for coaches: highlight zones, flag anomalies, and suggest attacking / defensive focuses.

Example: Before the North London derby, OWL delivers a 1-page set-piece threat map covering opponent’s near-post runs + Arsenal’s defensive shape gaps.

ARCHITECTURE

OWL 3-LAYER PIPELINE			
DATA LAYER	INTELLIGENCE LAYER	COACHING LAYER	
Opta / StatsBomb / Wyscout	xG / xA / GCA models	Briefing cards for Mikel & staff	
Tracking (Second Spectrum)	Passing network graphs	Pre-match dossiers	
Video (HUDL / own footage)	Set-piece threat maps	Half-time visual adds	
Internal session logs	Opponent scouting reports	Telegram / iMessage delivery	

Three clean stages. Plugs into existing tooling. No rip-and-replace required.

DEPLOYMENT

48-HOUR MODEL

- Hour 0-4: Credentialed access provisioning (Opta / tracking / video)
- Hour 4-12: Schema mapping + Arsenal-specific label alignment
- Hour 12-24: Model warm-start on last season's data
- Hour 24-36: Validation against known fixtures
- Hour 36-48: Go-live + first briefing card sent

SLA	TARGET	DELIVERED
Deployment window	72 hrs	48 hrs
Uptime	99.5%	99.9%
Response time (support)	< 2 hrs	< 30 min

OWL runs on secure, dedicated infrastructure. No PII shared outside Arsenal’s environment.

INTEGRATION

Analysts and coaches live in Telegram, iMessage, and Slack. OWL meets them there.

TELEGRAM	Group threads + direct chats. Rich cards with thumbnails.
IMESSAGE	Apple ecosystem native. Quick-look summaries.
SLACK	Workspace channels for analysts + performance.

HOW IT WORKS

- Coach requests: 'Opponent set-pieces vs low block' → OWL pushes 1-pager in 90 seconds.
- Scheduled: Pre-match at T-24h, T-12h, T-1h.
- Post-match: Full insight recap + trend delta within 60 minutes FT.
- QA loop: Analyst thumbs-up / feedback feeds back to model.

PROOF & PRICING

PROOF	DETAIL
Validated on 3 clubs	Premier League + Championship, full season data.
Accuracy uplift	+18% xG calibration over baseline public models.
Adoption	100% of analysts used OWL daily by end of week 1.

PRICING

TIER	SCOPE	INCLUDES	PRICE
Embedded	1st team, weekly	All deliverables + Telegram/iMessage/Slack	£6,500/mo
Squad	1st + U21s	All deliverables + squad-wide scouting	£9,900/mo

No long-term lock-in. Cancel anytime. Setup: one-time £1,200 onboarding.

NEXT STEP

- 30-minute working session with head of analysis
- Live OWL demo using your latest opponent footage
- 48-hour pilot after sign-off
