

WHITE PAPER · NON-HUMAN
INTELLIGENCE

The Dewey Method

How one managed-agent playbook
builds real wealth while most
companies have not implemented AI
at all.

By NOHUMA. Built on the verified methods of Nick Vasilescu (Orgo, Agent Empire) and the managed-agent model he operates through his agent, Dewey.

Human Architect · 2026

START WITH WHY

Your time should not be spent on work a machine can own.

That is the belief under every managed-agent business. Not 'AI is cool.' Not 'automation saves money.' The conviction that the recurring work draining your week is beneath you, and it can be handed to something that never sleeps.

Simon Sinek's Golden Circle: people do not buy what you do, they buy why you do it. The Dewey Method sells the why first, the agent last.

THE ENEMY

Every lead you miss while you sleep is a competitor's customer by morning.

The work does not wait. Quotes go unanswered. Follow-ups die. Inboxes pile up. A human team cannot be on every channel at every hour, and hiring more people costs more than the work is worth.

The default is to let the work pile up. The Dewey Method removes the human from the equation entirely.

THE WEALTH WINDOW

Most companies have not implemented AI. That is the opportunity.

54%

of UK firms report using AI in 2026, up from 35% in 2025. The majority still do not, and most that do are not getting value.

Source: British Chambers of Commerce, 2026 AI adoption tracker. US enterprise ~78% vs small firms ~20% (US Census BTOS, May 2026).

USING VS WINNING

There is a £78 billion gap between using AI and getting value from it.

UK SMEs sit in that gap. They have heard of AI. A few tried a chatbot. Almost none have an autonomous agent that owns a workflow end to end. That gap is where the money is made.

Whoever delivers the outcome, not the tool, captures the value.

THE METHOD

Nick Vasilescu sells managed AI employees at \$5,000 a month.

His agent, Dewey, builds, deploys, and supports client agents inside Slack and iMessage with almost no hands-on work from Nick. The human role is discovery, relationship, and close. The agent does the rest.

The method is repeatable. The components, architecture, and offer below are verified from his own transcripts and posts.

Source: Nick Vasilescu, Build With AI podcast #184; Orgo; Agent Empire. Verified 2026-07-31.

THE 8 COMPONENTS

An agent is not a prompt. It is a worker with tools.

- A computer of its own (dedicated VM)
- An email address in the client's name
- A phone number or live messaging line
- The client's channels (Slack, Telegram, iMessage)
- Real tools and connectors (1,000+ apps)
- A way to spend (an agent card)
- A knowledge base, one fact one home
- Observability across the fleet

Miss one and it is a toy. All eight and it is a worker.

ARCHITECTURE

One brain. Four specialists.

Build one strong general-purpose orchestrator. It talks to the client 99% of the time and hands off to specialised sub-agents: outbound lead generation, sales follow-up, content and assets, and support.

Why isolate? 'If you can create sub-agents, you minimise the blast radius of things that can go wrong.' One failing specialist cannot sink the whole operation.

FULFILMENT

Onboard it like a new employee.

Crawl, walk, run. Set it up in Slack. Let the client talk to it. Do not oneshot a custom build. The first week looks like training an intern on day three.

Most clients live in Telegram and Slack. The agent self-configures those channels. A client is live in 48 hours.

THE OFFER

Charge up front. Deliver in under 7 days. Or refund.

Old model: a 30 to 45 day custom build on a weak retainer. New model: take the retainer up front, ship one full automation in under a week, and guarantee it. If not fulfilled in 7 days, the money comes back.

'You give them an entire automation under 7 days. You just infiltrated their business with the agent.' Then expand to a fleet, and help them resell it to their own customers.

THE LOOP

Discovery call. Brief the agent. Live in 48 hours.

- Discovery call, recorded with a notetaker
- Brief handed to the builder agent (Dewey)
- Dewey builds the client's agent and onboards it to Slack
- 48 hours to live, with weekly improvements included

The human's job shrinks to: ask the questions, close the deal, answer the tricky ones.

WHY IT BUILDS WEALTH

**You sell the outcome.
You deliver it while
you sleep.**

A flat \$5,000 a month, everything included, with no usage maths. The agent runs the client's workflow. You are not trading hours for money. You are operating a system that compounds.

Because most companies have not implemented AI, every client you land is early. The window is open now, not later.

THE REVENUE LINE

Build the client an agent. Then help them resell it.

A managed agent can be white-labelled: your brand, your terms, single tier, no recruitment. The client offers it to their own customers. That is B2B2B, and B2B2B never churns.

What started as a cost line for the client becomes a revenue line for you. That is the wealth mechanism.

THE PROOF ANCHOR

Live in 48 hours. Or the first month is free.

The offer stands on a guarantee, not a pitch. If the agent has not saved more than its cost in human hours by day 30, measured against the client's own timesheet, the first month is refunded.

A guarantee from a named operator beats a feature list from a faceless tool. It is why the method closes.

THE WINDOW IS OPEN

Hire a Non-Human Intelligence.

Twenty minutes. One workflow. A one-page scope statement, no obligation.

NOHUMA applies the Dewey Method for UK businesses: managed Non-Human Intelligence, built, hosted, and run for you. Flat £5,000 a month. Live in 48 hours or refunded.
