

OWL · NON-HUMAN INTELLIGENCE

No code. No dashboard to babysit. One brain, four specialists, and a stack that shows up with its own desk.

THE ARCHITECTURE

A central brain directs four agents — outbound lead generation, sales follow-up, content and assets, and support or fulfilment. They hand work to each other so the workflow closes without a human in the loop.

THE STACK

Its own computer, its own email, a live Telegram line, and a seat in your Slack or Telegram. Real tools, simple billing, a memory that files one fact in one home, and constant health checks. Eight parts, one worker.

WHERE IT RUNS

Owl runs on an isolated client server with access scoped only to what the job needs. Your data never leaves your control, and it travels with you if you leave. Self-hosted, portable, private.

WHO IT SERVES

Trades and services, clinics and health, law and professional firms, and e-commerce. For each, Owl owns one recurring workflow — quote requests, intake, follow-up, or support — and runs it end to end.

THE SPEED

The stack is already built.
We deploy it to your server
and hand you a running
workflow within two days. If
we miss, the first month is
free. Speed is what you are
paying for.
