

OWL · NON-HUMAN INTELLIGENCE

Owl owns one recurring
workflow in your business.
Five thousand a month.
Everything included. Live in
forty-eight hours.

Objection 01

A junior's salary is the smallest number on the bill. Add tax, software, training, and the months before they are useful. Owl is one flat five thousand a month, live in forty-eight hours, owning one workflow from day one.

Objection 02

Owl takes the recurring task your best person dreads — the quotes, the follow-ups, the admin that eats the day. Your team moves up to the work only humans should do.

Objection 03

Owl runs on an isolated server with scoped access to only what it needs. It is portable, so you take it with you. We cannot see what you have not permitted, and neither can anyone else.

Objection 04

Owl is live in forty-eight hours or your first month is refunded. At day thirty, if it has not saved you more than five thousand pounds, we refund that month too.

Objection 05

ChatGPT waits for your team to type the right prompt and check the output. Owl owns one workflow end to end — it acts, it follows up, it closes the loop while you sleep.

Objection 06

The eight-part stack is already built — one brain and four specialists, configured, not coded from zero. We deploy it and hand you a running workflow within two days. If we miss, the first month is free.

Objection 07

Cancel whenever you want
— no contract, no notice
period, no exit fee. Your
Owl runs on a portable
server, so the work and the
setup travel with you.

CLOSE

Harvard Business Review
found buyers are seven
times more likely to qualify
a vendor they reached
within the hour. And
seventy-eight percent buy
from the first to respond.
Book the call. Live in forty-
eight hours.
