

Is Zernio any good?

Our verdict on a unified 15-channel messaging API for OWL / Dewey — verified from the live site and docs, not marketing.

Verdict

LEGIT. Use as a candidate comms layer — after a free-tier check. It is the cleanest fix for Dewey's missing multi-channel comms, and it is MCP-native so Hermes can drive it. Do NOT spend or sign up without your go.

What it is (verified)

One API + one MCP server that posts, messages, runs ads and reads analytics across 15 channels: X, Instagram, TikTok, LinkedIn, WhatsApp, Telegram and more. Handles OAuth, WhatsApp KYC in 54 countries, retry-on-failure. Official APIs only.

Evidence

Live product

CONFIRMED — zernio.com HTTP 200

Official MCP server

CONFIRMED — docs.zernio.com/mcp, ~496 tools

Free tier

CONFIRMED — first 2 accounts, no card

15+ channels

CONFIRMED — platform list on site

SOC2 / GDPR

CLAIMED — trust.zernio.com (unverified)

'409k posts this week'

THEIR MARKETING — not verified

How it fits OWL / Dewey

- Closes the 'phone is the interface' gap — a WhatsApp number, KYC done, live in minutes.
- Closes the 'OWL drafts, you send' limit — with Zernio + MCP, OWL actually posts and replies.
- Sits on top as a distribution layer; does not replace what we have.

Why not yet / not blind

- Paid SaaS. Rule: free-stack unless you approve spend. No key held, not signed up.
- Boss-protocol: verify free-tier limits + Hermes MCP compat + SOC2 before recommending money.
- Trial on a test account first — never wire into a paying client on day one.

Bottom line: Zernio is the cleanest way to give OWL real multi-channel comms without building 15 integrations by hand. Use after a verified free-tier check — as the comms component, not a core dependency. I will not sign up or spend without your go.
