

NON-HUMAN

# Intelligence

The operating model for the AI employee your business runs but never hires.

---

A field paper from Owl — the managed AI employee for UK small and mid-sized businesses (£1M–£2M turnover). Flat £5,000/month. Live in 48 hours.

© Owl. This document describes the Owl operating model. No personal names, no third-party brands.

## 01 — The shift

For a century, a business was bottlenecked by people: one person per task, one task per hour, one sick day at a time. That constraint is ending. Not because humans are replaceable, but because a large class of recurring work — the work that keeps a company small — does not require a human. It requires an agent that never sleeps, never forgets, and never asks for a raise.

We call this class of system **non-human intelligence**: software that owns a workflow end to end, operates inside your business, and delivers the outcome — not a suggestion, not a draft, the result.

*“Your best hire this year won't be a person.”*

## 02 — What non-human intelligence is

Non-human intelligence is not a chatbot. A chatbot waits for a prompt. An AI employee owns the job. The distinction is the difference between a tool you operate and a worker you manage.

|                     | Chatbot / LLM tool    | Managed AI employee (Owl)             |
|---------------------|-----------------------|---------------------------------------|
| Initiative          | Waits for your prompt | Owns a workflow autonomously          |
| Where it lives      | A window you open     | Your Slack, Telegram, email, calendar |
| Who runs it         | You                   | We run it — fully managed             |
| Output              | A response            | The work, done                        |
| You touch the tech? | Yes                   | No                                    |

An Owl agent is a managed employee with a full operating stack: one central brain directs four specialist agents — one finds and chases leads, one follows up and closes, one produces your content and assets, one does the fulfilment work.

## 03 — The eight parts

Miss one and it is a toy, not a worker. Every Owl agent is built on eight components:

**01 Its own computer — Its own** A dedicated server for your agent alone. No shared tenant, no neighbour noise, no other client's data near yours.

**02 Its own email — Its own** A domain address in your name. It sends and receives as a real member of your team.

**03 A live line — A live** A working Telegram line. Message it, it answers. Reachable, not a black box.

**04 Your channels — Your channels** Wired into your Slack or Telegram. It works where your team already talks.

**05 Real tools — Real tools** It uses your systems — files, the web, the terminal behind it. It does the job, not just describes it.

**06 Simple billing — Simple billing** One invoice, one price, every month. No per-seat maths, no usage surprises.

**07 A memory of your business — A memory** One governed knowledge layer — one fact, one home. Pricing, customers, do-and-don'ts, all in a single source. This is the edge: it stays accurate because it knows you, not the open internet.

**08 Watching it — Watching it** Health checks run constantly and alert us before your customer ever notices.

---

## 04 — Why it pays

A decent UK employee runs £30k–£45k before National Insurance, onboarding, and the three-month ramp to usefulness. Then they take leave, they quit, they have off days. Owl is £5,000 a month — no recruitment, no employment law, no maternity leave, no complaints, and it never clocks out.

The real maths is not headcount. It is the leads your old process drops. A business taking 200 enquiries a month and losing 30% of them at £500 average value is leaving £24,000 a year on the table. An Owl agent that recovers 80% of that gap returns £19,200 a year from one workflow — and it scales to the next workflow, and the next.

*“The question isn't 'why pay £5k for an AI agent?' It's 'why pay far more for a human to do the work an agent does better, 24/7?’”*

---

## 05 — The guarantees

**Live in 48 hours.** Or the first month is refunded — automatically, no form, no debate.

**Saves you more than £5k/month.** Measured at day 30 against the human hours it replaced. If not, first month refunded.

**Your data stays yours.** Isolated environment, scoped — not blanket — access. Portable on exit.

**No contract. Cancel anytime.** Month to month. Stay because it works, not because you're trapped.

Every client gets a live dashboard showing the work done, the leads chased, and the hours reclaimed — measured against the human cost it replaced. On the call we walk you through a live client dashboard in your exact industry, end to end, so you see the proof before you decide.

## 06 — From one agent to a fleet

Start with one workflow — lead follow-up. Then we expand to the next, then the next. Before long you have a fleet of agents, each owning a piece of the operation. And the agent that runs your business can be offered to your own customers under your label. That covers Owl several times over, so it is
