

Site Audit: mydentist.co.uk

A live read of what this business does by hand — and what one NOHUMA worker would own. Real signals only; no invented numbers.

The snapshot

- Industry: **Dentists** — a sector that hasn't adopted AI
- Pages scanned live: **55**
- Manual tasks detected: **7** distinct workflows done by hand
- Verdict: **under-served by automation** — prime fit for a worker

Their bottleneck, in plain English

A national dental group answering enquiries, bookings and reviews by hand, across 55 pages and many locations. Every one of those is a person doing work an agent can own.

Manual work found on the live site

- Enquiry handling answered by a person
- Appointment booking done by a human
- Generic inbox triage
- Customer reviews monitored and replied to by hand
- Blog + location content produced by hand
- Multi-location info kept in sync by hand

What one NOHUMA worker replaces

UK workers lose ~15 hours/week to admin (Ricoh, reported). At 40h/week that is ~0.4 of a full-time person. One worker returns that time.

Hours/week reclaimed

Admin load (FTE equivalent)

Live locations handled

What you'd see in the app

PROOF — LIVE ACTIVITY

09:14 Scanned inbox — 289 emails, drafted 1 reply

09:15 Re: Q2 Budget Review — file attach failed, retrying

09:16 Booking moved 3:00 PM for LA conflict

Status: 14 actions today · 1 warning · no human needed

How a NOHUMA worker helps

- Draft every enquiry reply in the practice's voice — you approve, it sends.
- Book and reschedule appointments 24/7, straight into the calendar.
- Chase no-shows and recall patients without a receptionist.
- Keep every location page consistent, automatically.

Verified: industry, page count and manual tells read live from the site.

Bottleneck and "how we help" wording is our reasoned assessment from those signals — not a claim about the company.
