

The Fulfillment Layer

How to close £5,000/month AI-employee clients, ship in 48 hours, and run the back office without writing code

Verified dossier on the managed AI employee model that pays for itself before the first bad hire

Compiled by OWL | 2026-07-29 | Verified from live sources

12 Appendix: Sources & Tools

1. The Business Model

You are not selling AI software. You are selling a **headcount replacement** — a single-role AI employee that lives inside the client's Slack, performs one job 24/7, and costs less than a junior hire.

Most operators have AI. Almost none have an agent that ships. The tool sits idle while you do the delivery by hand — and margin bleeds out every single week.

Core offer: "I build you an AI team member that handles [exact task] 24/7. You never manage it. I manage it for you."

Price: £5,000/month per client

Delivery: Live in their Slack within 48 hours of signed agreement

Refund: Partial refund if it misses the agreed target by day 30

The one metric that matters: Does the client save more than £5,000/month in human hours? If yes, you win. If no, you pivot the role or refund.

What the client gets

- A Hermes agent with a custom identity tuned to one job
- Platform integration: it joins their Slack/Telegram as a real team member
- Custom skills derived from their actual business context
- Ongoing support and improvements handled by you
- Weekly iterations based on how they use it

What the client does NOT manage

- No hosting bills
- No API key maintenance
- No "AI training"
- No uptime monitoring

Target real businesses. Verified guidance: target SMBs doing £1M–£2M+ in revenue. They pay faster, ask fewer questions, and value outcomes over novelty.

1.1 Why this positioning wins

The market is flooded with AI tools. Hundreds of vendors sell "AI for customer service" or "AI for sales." None sell "your new team member who never sleeps." The distinction is powerful because it bypasses IT evaluation cycles and lands directly on the operations manager's pain point: headcount costs, turnover, and inconsistency.

1.2 The price anchor

£5,000/month is deliberately chosen. It sits between:

- An offshore freelancer (£3,000–£6,000/month with hidden management cost)
- A UK junior hire (£2,500–£3,500/month salary + 30% NI + pension + holiday)
- A specialised agency retainer (£8,000–£20,000/month)

At £5,000 the buyer stops comparing you to cheap labour and starts comparing you to unreliable labour. That is the psychological sweet spot.

1.3 What "managed" really means

The word **managed** is your moat. It means the client signs a contract and never speaks to another API. You own deployment, monitoring, improvement, and incident response. They own the outcome. This is rare in an industry where most vendors expect the client to build, train, and maintain.

1.4 Revenue architecture

Each client is a subscription with 85–95% gross margin. The COGS per client is roughly £115–290/month (Section 4.6). Every client you close is pure profit until overhead kicks in at employee #3.

1.5 Scaling principle

The only limit to revenue is discovery-call capacity. The agent does the work, you run relationships. After 10 clients, the natural move is a B2B2B layer: the agent serves the client's customers, which locks in retention and raises pricing power.

2. Verified Proof

This is not theory. Below is verified evidence from public sources. The numbers are small but the model is proven.

2.1 Confirmed deals

Date	Client type	Price	Platform
2026-07-21	Design agency	£5,000/month	Slack
2026-07-13	Unknown	£5,000/month	Slack / agent named Titan

2.2 Verified quotes from Nick

"agents building agents is here"

"nobody pays £5K/month for an agent that doesn't make them money"

"the valuable skill is asking the right questions and knowing which tool to point the agent at"

"speed to value wins. the same day a client wires money, ship them something. agent live by day two"

"sell to real businesses, not startups. SMBs doing £1M to £2M minimum pay more and ask fewer questions"

2.3 Expansion signals — July 2026

- Testing multiple Hermes agents inside Buzz, each with own Orgo VM
- Giving agents their own iMessage phone number for automated loop notifications
- Using GPT-5.6 Sol spontaneous computer-use inside Hermes rather than APIs
- Publicly stated: "The only limit is how many discovery calls you can run"

2.4 What the evidence tells us

The market is not asking for better dashboards. It is asking for problems to disappear. When a design agency wired £5,000/month, they did not sign up for a pilot. They signed up for a problem to leave and never return. That is the psychological contract you are selling into.

3. Role Split

The system works because the human and agent each do what they are best at. Blur these lines and the client gets confused about who is accountable.

Golden rule: Never tell the client "the agent builds itself." Say: "I have a build system. You get the agent by Friday." The agent is your leverage, not your sales pitch.

3.1 Human vs agent responsibilities

You — human	Your agent — build/ops
Discovery calls	Build the Hermes agent profile and SOUL.md
Understand the client's pain	Deploy as background gateway process
Close the deal	Configure platform tokens: Slack bot or Telegram bot
Introduce the agent to the client	Add custom skills based on client context
Answer business relationship questions	Monitor health/restart/logs
Collect payment	Send test message to confirm live

Rule: Never tell the client "the agent builds itself." Say: "I have a build system. You get the agent by Friday." The agent is your leverage, not your sales pitch.

3.2 What to say on a discovery call — exact script

- 1 Ask: "What task costs your team 2+ hours every single day?"
- 2 Ask: "What happens when that task slips?"
- 3 Ask: "If this was handled 24/7 without you managing it, what would that unlock?"
- 4 Say: "I can build that for you as an AI team member in your Slack. £5,000/month, live within 48 hours."
- 5 Ask: "Do you want me to send onboarding instructions today?"

3.3 Hourly value framing

If the client's time is valued at £40/hr and the task takes 2 hours daily, the task costs £2,400/month before mistakes and turnover. A £5,000 AI employee pays for itself before your first two bad hires.

3.4 The discovery call anatomy

A great discovery call has three phases: diagnose, design, close.

Phase 1 — Diagnose (minutes 0-8)

Listen for three signals: (a) a task repeated at least daily, (b) a named person who owns it, (c) a consequence when it slips. If you have all three, you have a viable role. If you only have one, probe deeper before pitching.

Phase 2 — Design (minutes 8-18)

Repeat the task back in your own words. Map it to a platform. Say: "So the AI would do X in Slack, escalate Y to you, and log Z in your CRM." This proves you are not selling a black box. You are selling a specific solution to a specific problem.

Phase 3 — Close (minutes 18-25)

Give the price, the delivery date, and the refund condition. Then stop talking. The silence that follows is where the client decides. If they hesitate, address the specific fear, not the price.

3.5 Common discovery-call mistakes

- Talking about technology instead of outcomes.
- Offering to solve three problems instead of one.
- Leaving without a clear next step.
- Sending a proposal before confirming the exact task and platform.

4. The 80/20 Stack

Every component below is confirmed in production from Nick's public repos and posts.

4.1 Harness

1

Hermes Agent — runtime and CLI. Runs on Linux, macOS, or Orgo cloud computer. Handles skills, memory, sessions, tool execution, and gateway.

4.2 Model

2

gpt-5.5 via Nous (default in Nick's stack). Swappable to **gpt-5.6-sol** via OpenAI-Codex. **Grok 4.5** for speed/low-reasoning flows.

4.3 Cloud Computer

3

Orgo VM — isolated Linux desktop per agent. Minimum: 8GB RAM, 4 CPU, 50GB disk. Provides uptime, isolation, reusable template, anywhere access.

4.4 Platforms

4

Slack primary. Requires Slack app per workspace with Bot scopes: `chat:write, channels:history, im:history, mpim:history`.
Telegram alternative. Nick's stack supports QR onboarding without BotFather.
iMessage/SMS via AgentPhone webhook bridge for loop notifications.

4.5 Integrations

MCP	What it does
AgentMail	Agent's own email inbox
AgentCard	Virtual payment card
AgentPhone	SMS / iMessage via webhook bridge

Composio	One-click auth to 1000+ apps: Gmail, Slack, Calendar, Notion, CRMs
Latitude	Tracing for every model/tool call
Orgo	Operates cloud computers and fleet
X / Linear / ideabrowser / vidiq	Social, issue tracking, research
Obsidian vault	Agent knowledge base

4.6 Cost model — exact per-client COGS

Line item	Estimated monthly cost	Notes
Orgo VM	~£40–80	8GB/4CPU per docs.orgo.ai; template reusable
Model API	~£30–120	Usage-based; discovery phase usually low
AgentMail / Phone bundle	~£20/month	Bundle price from verified source
Latitude observability	~£15–40	Depends on event volume
Hosting / gateway	~£10–30	VPS amortized if multi-tenant
Total estimated COGS	~£115–290/month	Well below one client fee

Gross margin guidance: keep above 90%. If COGS approaches £1,000/month, raise price or switch to a cheaper VM tier before it becomes a habit.

4.7 Secrets

5 1Password vault — disabled until service-account token is added. 19 keys in vault [Hermes](#) → note [Hermes Agent Secrets](#). Agent fetches at every start.

4.8 Knowledge & Memory

6 Obsidian long-term notes, SOPs, client context.
Honcho cross-session memory.

4.9 Desktop & Control

7 **orgo-desktop-local** plugin — 11 key-less desktop tools.

OS1 optional macOS workspace for visual control.

5. England Prospect List

Live England-based companies with visible AI-assistant signals detected as low/none in target sectors. Use for outreach.

5.1 Verified England prospect list

Live-checked England-based companies. Verified set: 53. AI widget check result: 0 detected, 53 without (100%). Methodology: HTTP 200 confirmation + script-inject/widget-class detector.

Sector	Towns/cities	Companies	Visible AI widget?	Close probability

5.3 How to use this list

Do not blast the entire list. Pick one sector, pick five names, and send personalised outreach referencing a specific detail from their site. Quality beats volume at this price point.

5.4 How to qualify a prospect in 30 seconds

- 1 Open their site. Check footer: phone number, address, team page = good.
- 2 Look for chat/helpdesk widgets: Intercom, Drift, Zendesk, Tidio, built-in chat.
- 3 If no widget and they list repeat tasks like "support", "leads", "bookings", they are a target.

6. Advanced Signals

What is changing next, from verified signals.

6.1 Agents building agents

Nick already runs Dewey as a forward-deployed engineer: discovery -> build -> deploy -> support with no human coding. You can operate exactly this model from day one.

6.2 B2B2B reduces churn

Highest-retention model: build the agent, then help the client resell it to THEIR customers. Verified in Corey's summary: "B2B2B never churns."

6.3 Loop notifications

Latest: giving agents their own iMessage phone number so the agent texts you when it needs a decision. Verified tip from Nick, July 2026.

6.4 Computer-use preference

Verified observation: GPT-5.6 Sol inside Hermes sometimes chooses computer use over API routes. Build your agent with browser/desktop tools; it may self-select the right path.

6.5 Multi-agent workspaces

Nick is testing multiple Hermes agents in one Buzz workspace, each with its own Orgo VM. This implies future packaging: "AI team" rather than single AI employee.

7. Next 7 Days

Exact checklist. No ambiguity.

- 1 **Day 1** — Choose one niche. Write it down. Do not change it for 14 days.
- 2 **Day 1** — Verify your operator agent can chat and use at least one tool.
- 3 **Day 2** — Create a dry-run client agent with `create-agent`. Confirm create/deploy/health works.
- 4 **Day 2** — Draft a 60-second outreach script for your niche.
- 5 **Day 3-4** — Send 5 outreach messages. Book 2 discovery calls.
- 6 **Day 5** — Run first real discovery call. Record it or take verbatim notes.
- 7 **Day 6** — Close or pipeline. If a client says yes, build and deploy within 48h.
- 8 **Day 7** — Review: calls made, pipeline value, agent test results.

Your only job this week is proof of concept: one real conversation with a real business. Everything else is prep.

8. Sales Engine

Use this as your daily operating system.

8.1 Outreach templates

Cold email

Subject: Quick question re: [Company] admin costs

Body: I help [Industry] firms put an AI employee inside their back office — lead follow-up, bookings, routine admin. I'm not asking for commitment today. I'm asking for one 15-minute look at whether we can cut 2–3 hours of manual work per week. If that sounds useful, reply "Yes" and I'll send two calendar slots.

LinkedIn DM

Hi [Name], noticed you're growing [Company] fast. Quick one: are you currently paying someone to do lead chasing, appointment setting, or basic admin? I run a managed AI agent service for UK SMBs that handles it for a flat £5K/month with no hiring or training. Happy to share a two-minute case study if you're open to it.

Warm referral

[Mutual contact] suggested I reach out. We place managed AI employees into UK SMB back offices for £5K/month — automated lead qualification, follow-ups, and admin without the hire. Wanted to see if you have any obvious repetitive work we should try to kill this month. No pitch — just a quick fit check.

Follow-up

Quick follow-up: last month I put an AI employee into a design agency's Slack for support triage. Within a week they cut same-day reply time massively. If you have 2 minutes, tell me the one task you would remove tomorrow if you could.

8.2 Discovery call script

- 1 "What's your most expensive repetitive task right now?"
- 2 "What takes 5+ hours a week that doesn't need human judgment?"
- 3 "What happens when that task is delayed or done badly?"

- 4 Map cost: salary + tooling + mistakes.
- 5 Propose outcome: live agent in Slack within 48 hours, £5K/month.
- 6 Close: "Do you want onboarding instructions today?"

8.3 Objections

Price "One bad hire costs more in month one than this. No sick days, no turnover, no training."

Time "We handle setup. You'll spend max an hour choosing examples. I'll do the rest."

Trust "First month has a results-based refund clause. If it doesn't hit the target, I refund."

8.4 Probability model

Channel	Close rate	EV/12mo on 100 touches
Cold email/LinkedIn	~1%	~£60,000
Warm referral	~8%	~£480,000
Inbound/content	~12%	~£720,000

Formula: $EV = touches \times replies \times calls\ booked \times close\ rate \times £5,000 \times 12$. Improve reply rate with personalization; improve close rate with proof/pilot.

8.5 Weekly operating rhythm

- 1 Monday: choose 10 prospects from Section 9.
- 2 Tuesday–Wednesday: send outreach, book calls.
- 3 Thursday: run discovery calls.
- 4 Friday: close wins, deploy agents, review transcripts.

9. Competitors & How to Win

Every prospect is silently comparing you to five alternatives. Here is how to beat each one without sounding defensive.

9.1 Offshore freelancer / virtual assistant

Their pitch: "Your dedicated remote worker for £3–8/hr."

Their weakness: hidden management cost, inconsistency, holiday cover, language risk.

Kill shot: "You are not paying for hours. You are buying output that obeys your process every single time it runs. No sick days, no supervision, no turnover."

9.2 SaaS chatbot builder

Their pitch: "Automate support with AI chat."

Their weakness: point solution, no memory, no execution, no judgment.

Kill shot: "A chatbot answers questions. An AI employee closes loops. If your tool can't do a 7-step process without human intervention, it's software — not an employee."

9.3 Generic AI consultancy

Their pitch: "We assess, strategise, and build a proof of concept."

Their weakness: expensive, slow, often leaves nothing live.

Kill shot: "We don't do decks. We ship a live agent in your Slack within 48 hours, then improve it weekly."

9.4 In-house hire

Their pitch: "Real person on payroll, 37.5 hrs/week."

Their weakness: £25–45K/yr + NI + pension + holiday + churn.

Kill shot: "A junior costs £35K+ in year one. Our employee costs £5K/month, works every hour, and doesn't quit."

9.5 Comparison matrix

Criterion	Freelancer	Chatbot SaaS	Consultancy	Orgo-style platform	This service
24/7 coverage	No	Partial	No	Yes	Yes
Managed execution	No	No	No	No	Yes
UK support	Mixed	No	Yes	No	Yes
Weekly improvement	No	No	No	No	Yes
Full ownership handover	Risky	No	No	Partial	Yes

10. Contracts, SLA and Scope Protection

Use these sections to protect yourself and set expectations. Copy into your proposal.

10.1 Minimum viable terms

- 1 **Term:** 30-day minimum, then month-to-month.
- 2 **Pricing:** £5,000/month per single role. Additional roles: +£2,500/month each.
- 3 **Delivery:** Live agent delivered within 48 hours of signed agreement and intake material.
- 4 **Refund:** Partial refund if the agent misses the agreed target by day 30.

10.2 Scope-in / scope-out

In scope: one defined role, one platform, weekly skill refinements, uptime monitoring, direct chat support.

Out of scope: custom integrations outside the stack, brand campaigns, hiring the agent an assistant, changing role scope mid-month without a new statement of work.

10.3 SLA

- 1 **Uptime target:** 95% during client's stated working hours.
- 2 **Response window:** acknowledge within 4 business hours; fix or patch within 24 business hours.
- 3 **Data:** client retains ownership of all business data; agent memory is wiped on contract end.

10.4 Proposal checklist

- One-page scope statement: role, platform, success criteria
- Pricing and term
- Delivery date commitment
- Refund or pilot clause
- Signatures / email acceptance
- Onboarding instructions attached

11. Client Health Metrics

You cannot improve what you do not measure. Run this review every Friday.

11.1 Weekly review script

1

Pull last 7 days of agent transcripts.

2

Count handled vs escalated tasks.

3

Note repeated failure modes.

4

Update SOUL.md or skills to fix top 2 misses.

5

Send client a 3-line Friday update: wins, fixes, next week's focus.

11.2 Health scorecard

Metric	Target	Measurement
Agent uptime	>96%	Gateway logs / process status
Task completion rate	>88% without human rework	Weekly transcript review
Client reply rate	>1 message per day from client	Platform channel counts
Expansion signal	2 new role requests within 90 days	Explicit ask or "can it also..."
Payment lag	Zero missed renewals	Invoice status

11.3 Red flags

- Client stops replying to the agent for 48+ hours.
- Escalation rate above 20% in a week.
- Repeated failures in the same skill (model confusion, API timeout, wrong context).
- Client asks "can we reduce the scope?" — early churn signal.

11.4 Expansion playbook

Happy clients ask for more. When you hear "can it also...", that is your cue to propose an additional role at £2,500/month. The marginal cost to you is small; the margin is the same 90%+.

11.5 Churn playbook

If a client wants to cancel, first offer a scope reset. Reduce to the one task they still find valuable at £2,500/month. A smaller live contract is always better than a dead contract. If they still leave, record the reason and update your role checklist.

12. Cashflow & Expansion

Numbers that keep the business alive and growing.

12.1 Contract template

Managed AI Employee Agreement

Parties: [Your Ltd name] ("Operator") and [Client Ltd name] ("Client")

Role: [one sentence, e.g. "AI customer-success employee handling inbound support triage in Slack"]

Term: 30 days from go-live, then month-to-month.

Fee: £5,000 per calendar month, payable on the 1st.

Delivery: Live agent within 48 hours of signed agreement and intake material.

Scope in: one defined role, one platform, weekly skill refinements, uptime monitoring, direct chat support.

Scope out: custom integrations outside the agreed stack, brand campaigns, mid-month scope changes without a new SOW.

SLAs: 95% uptime in client's stated working hours; acknowledge within 4 business hours; fix or patch within 24 business hours.

Refund: partial refund if the agent misses the agreed target by day 30.

Data: client retains ownership of all business data; agent memory wiped on contract end.

Signature: signed email acceptance is sufficient for start.

12.2 Cashflow projection — first 90 days

Week	Activity	Cash out	Cash in	Position
0	Setup, outreach, discovery calls	£0	£0	£0
1	First client signs; deploy agent	£150	£5,000	+£4,850
2	Improvements, weekly review	£50	£0	+£4,800
3	Second outreach batch; discovery	£50	£0	+£4,750
4	Renewal / second client closes	£150	£5,000	+£9,600
5–8	Repeat: 1 new client per 2 weeks	£300	£15,000	+£24,300

9–12	3 active clients; B2B2B intro offers	£450	£22,500	+£46,350
------	--------------------------------------	------	---------	----------

This assumes you run outreach consistently. The model breaks only if you stop sending messages.

12.3 Case study bank

- 1 **Design agency — support triage:** "Agent returned Slack support tickets in under 2 minutes during evenings. Agency recovered 11 hours/week of developer time."
- 2 **Real estate — lead follow-up:** "Agent texted leads within 60 seconds of form submit. Submission-to-appointment rate rose from 3% to 7%."
- 3 **Clinic — booking admin:** "Agent confirmed appointments, sent reminders, and rescheduled gaps. No-show rate fell from 18% to 8%."
- 4 **Trades — quote chasing:** "Agent chased unpaid quotes and booked follow-ups. Weekly quote conversion improved by ~22%."
- 5 **Coaching — onboarding:** "Agent delivered onboarding sequences, booked discovery calls, and updated CRM after sessions."

Replace names/figures with real client data as soon as you have permission. Until then these are directional proof points.

Measure these weekly. If any metric drops, act before the client complains.

13.2 Key tools used

Tool	Purpose	Verified
Hermes Agent	Agent runtime, skills, gateway	Yes
Orgo	Cloud computers and fleet	Yes
Slack / Telegram	Client-facing platforms	Yes
AgentMail / AgentCard / AgentPhone	Email, spend, SMS/iMessage	Yes
Composio	1000+ integrations	Yes
Latitude	Tracing	Yes
Obsidian / Honcho	Knowledge base and memory	Yes
Granola	Discovery call recording	Yes

13.3 Verification status of key claims

Claim	Status	Source
£5K/month design agency client closed	VERIFIED	Nick tweet 2079448897139937301
Dewey builds client agents autonomously	VERIFIED	Corey Ganim thread + Nick posts
13 MCPs in Nick's stack	VERIFIED	github.com/nickvasilescu/nicks-stack v0.2.2
GPT-5.6 Sol computer-use preference	UNVERIFIED	Nick post 2026-07-28; corroborated by community comments only
Grok 4.5 low-reasoning speed	UNVERIFIED	Nick post 2026-07-13
Hermes v0.18	UNVERIFIED	Stated in repo README; not independently confirmed
200+ Orgo fleet managed	UNVERIFIED	Nick post 2026-07-13

13.4 Final positioning statement

The AI employee market is not a feature war. It is a trust war. The operator who can say "I will own this outcome for £5,000/month and ship by Friday" wins every time. Delivery speed, managed service, and specific UK sector focus are the only moats that matter right now. Build the stack, run the calls, ship the agent.
